

Falcon Logic

Sector: Commercial Products

Product: RackBrains

RACKBRAINS

Cloud Brainstorming & Collaboration System

RackBrains grew from an internal need to better create ideas for commercial and internal products and form nascent requirements for brand new Government software products. As a technology company, we use many modern commercial tools to run our business – Jira for requirements tracking, Google Sheets & Docs for shared spreadsheeting and document creation, and Slack for companywide, real-time chats, posts, and discussion boards. However, none of these systems provided an easy way for multiple users to categorize and rank ideas effectively.

Enter RackBrains. We started RackBrains in 2018 to help support idea generation for new products we were building for a large Government customer. Since then, we have used it internally on numerous projects and have now begun to market it as a cloud-hosted collaboration solution.

Capabilities

CAPABILITY

Web, AWS, SPA (Single Page Application)

INDUSTRY

Commercial

TECHNOLOGY / SKILLS

Angular

.NET Core

SQL Server

SignalR/WebSockets

AWS CloudFront

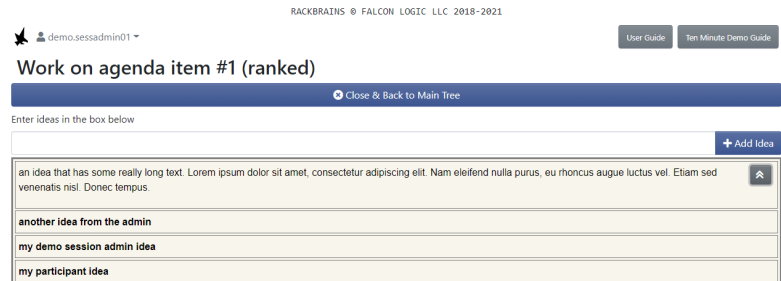

AWS S3

AWS EC2

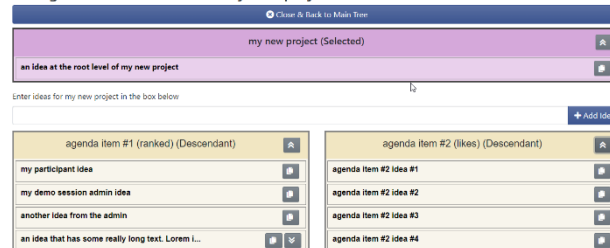

AWS Lambda

Collect Ideas

Drive your users through ideation by collecting input in real-time. Users see data generated as it is collected to reduce duplication.

Categorize & Collaborate on my new project

Categorize

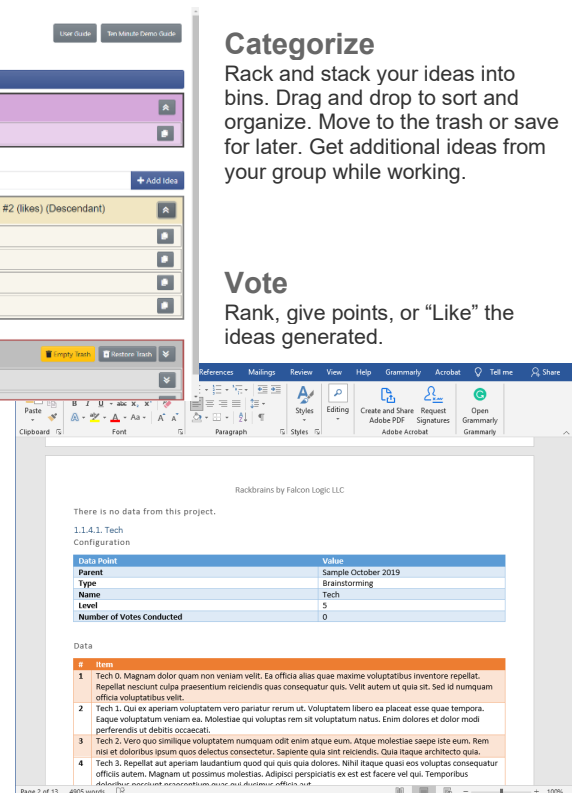

Rack and stack your ideas into bins. Drag and drop to sort and organize. Move to the trash or save for later. Get additional ideas from your group while working.

Vote

Rank, give points, or "Like" the ideas generated.

Report

Output all the data collected to a Word report for sharing with the team, management. Export to Excel or CSV to load into a requirements backlog.
