

Identify → Qualify → Bid → Win

99% of the contracts on SAM.gov and eBuy — most organizations have no shot at winning. While you sleep, BidMore WinMore performs AI analysis, triage, and a fit recommendation to slash the time required to identify and qualify the ones you can win, based on data, not gut feelings. Then, use inbuilt AI-enabled drafting tools to create RFI and first-draft RFP responses.

IDENTIFY — Cut through the noise

- AI reads every SAM.gov and eBuy solicitation document and summarizes the key points.
- At-a-glance opportunity visibility — no hours of document review.
- USAspending.gov data surfaces prior incumbents to help you qualify.

BID — Draft and respond

- Upload your capture data: past proposals, capability statements, and more.
- BidMore WinMore drafts RFI responses and first-draft RFP submissions.
- Your data stays secure and can be discarded when you're done.

QUALIFY — What's my shot?

- Org-fit analysis against your capabilities, size, NAICS, and geography.
- Growth targets and past performance weighed into a go/no-go score in seconds.
- Drop low-PWIN pursuits fast and move on.

WIN — Bid less, win more

- Stop burning hours on opportunity screening.
- Focus only where you're positioned to win.
- Write stronger responses with the time you get back.

How It Works — Three steps to smarter bidding decisions

We Hunt

We pull new opportunities from SAM.gov and eBuy around the clock, filtered to the NAICS codes and set-asides that fit your business.

AI Analyzes

Every opportunity runs against your capability profile. You get a fit score, a risk read, and a summary you can act on.

You Decide

Review the scored pipeline, flag what's worth pursuing, and make bid/no-bid calls on data instead of gut feel.

YOUR DATA, YOUR CONTROL

- Upload only what you choose — past proposals, capability statements, or teaming data — for as long as you need it.
- Nothing is retained by default once a draft is delivered; data can be discarded on your schedule.
- Built to fit the same data-sensitivity standards your capture team already works under.

If your capture team spends 99% of their time on qualification and looking at no-shot RFPs — use BidMore WinMore and spend your time proposing on the ones you can win, not sifting through the noise.
